WEATHER OF CONCERN

Weather of Concern

- The National Weather Service is reporting that a weather system is moving through Northern California that will bring periods light precipitation and gusty south winds to portions of valley locations this evening.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

The storm system arrived yesterday will continue through today, with another round of widespread rain and some accumulating high elevation snow. A cooler storm system moves through the region on Wednesday with more significant snowfall through Thursday.

An unsettled weather pattern will continue over the region into next week as a series of weather systems moves through the region. Many days through this weekend will have precipitation with the driest spell expected to be Friday. Snow levels will vary quite a bit, not only by location, but with each weather system. It appears that the lowest snow levels will be around 3500-4500 ft. in the north and 6000-7000 ft. in the south. Thursday is most likely to have the lowest snow levels this week at the lower end of those ranges. There will generally be relatively light amounts of snow accumulation over the mountain roadway passes. Periods of gusty southerly winds will also continue as each storm system moves through the region, but the strongest winds will remain in the high country where gusts during the periods of stronger winds will be 30-40 mph while most lower elevation areas will see gusts up to around 25-30 mph then.

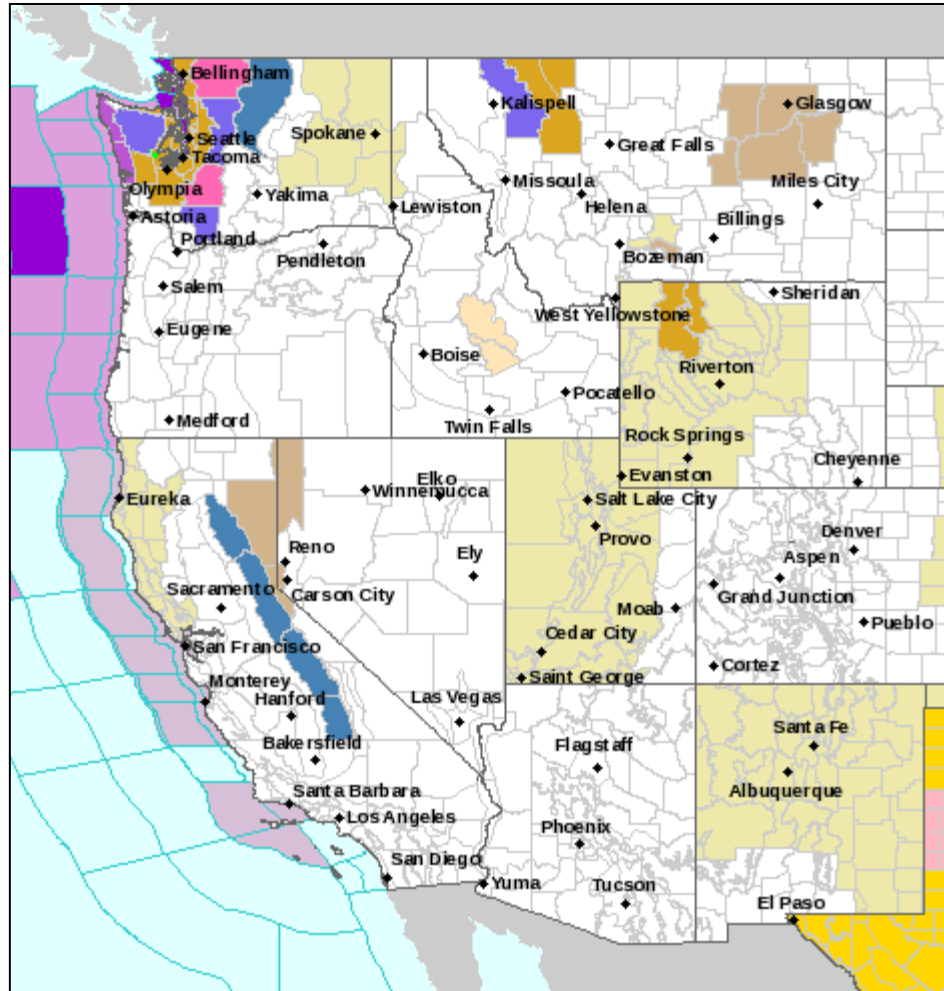

SOUTHERN CALIFORNIA

Inland warming trend through Tuesday, then cooling into Thursday as onshore flow strengthens with gusty west winds for the mountains and deserts.

A weak ridge of high pressure will bring a little above normal temperatures to the region through Wednesday, with mid 50s to mid 60s across the mountains and upper 60s and 70s in the valleys. A Pacific trough will cool temperatures to a little below normal Thursday. North winds of 15 to 25 mph with gusts to 40 mph will surface across Santa Barbara County and the Grapevine tonight and Tuesday night. There will be westerly winds of 20 to 30 mph with gusts to 50 mph across the wind prone mountain and desert areas Tuesday morning through Thursday night. The trough will bring showers to Central California Wednesday night through Thursday night, with possible showers across the region Thursday night. Most of Central California will receive between a quarter inch and a half inch of rainfall, while most of the region will receive less than a tenth of an inch of rainfall. However, the Central Sierra and the Big Sur Coast will receive between 1 and 3 inches of rainfall with this trough. High pressure will build north from Mexico bringing a warming and drying trend Friday through this weekend.
